

DUAL UNIVERSITY TRAINING BACHELOR - MASTER

University Degree

Deep Theoretical Knowledge

University Study Quality

learning In Real Working Conditions

Deep Practical Knowledge

Work And Study at the Same Time

Vilnius Gediminas Technical University together with German Hanse-Parlament has started the implementation of a joint project "Designing and implementing a dual Bachelors's degree study course with integral attainment of a Bachelor's and Master's degree".

The Hanse-Parlament unites 45 chambers of commerce, industry and crafts, universities and other business promoting organizations from 10 Baltic sea region countries, as well as Ukraine, Belarus and Hungary. Hanse-Parlament bases its strategy on the development of a broad range of small and medium-sized businesses and crafts by sponsor the training of young skilled professionals, executives and entrepreneurs.

The essence of the newly developed "Electrical Engineer - Master" study program is a person who has completed his studies in a higher education institution, will acquire the theoretical knowledge of a bachelor's degree, and will also be fully prepared to work as a master. To this end, the aim is to create a totally different structure of the study program: during the whole period of study the student will spend 50 % at a higher education institution, by listening to the theoretical courses of Electrical Engineering in the undergraduate level and 50 % time he will spent in a company working according to the specifics of his studies and doing a variety of practices. In this way, he will acquire the necessary skills for the master.

This study model for companies participating in the project is for those companies in which students will practice, will open up new opportunities for themselves to prepare qualified specialists who, after graduation from an institution of higher education, will immediately be able to work as a master in a position without any additional preparation. Due to long-term practices during the studies these specialists will already adapted to the specifics of the company, the nature of the work, etc. The students will be useful in the sense that they will be able to prepare a bachelor's final thesis on issues of concern to the company and make specific proposals to improve the situation.
